

1. Enter the maximum area that can be used for the wholesale of catches landed or loaded in the fish market in m² units.

(m²)

101
-----	---	---	---	---	---	---	---	---	---

2. Enter the number of fishery product wholesalers and fishery product purchasers that belong to the fish market as of January 1.

		(Business operator)							
Fishery product purchaser	Fishery product wholesaler	111
	Shipping agent in producing area	112
	Processor	113
	Others	114

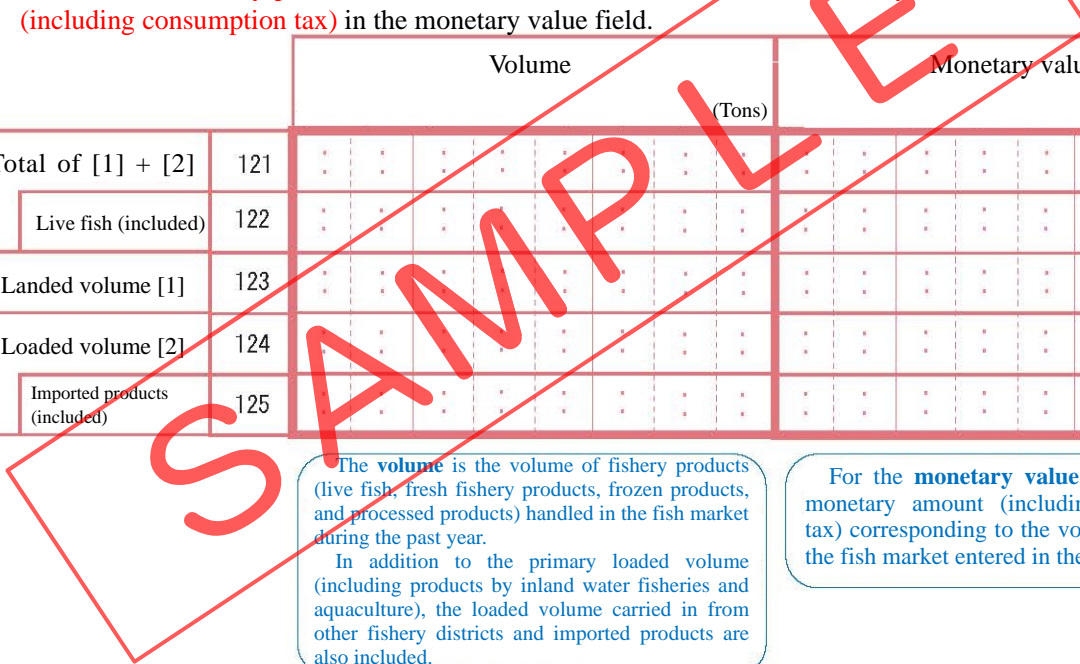

A **fishery product purchaser** is a shipping agent in producing area or a processor, etc. that purchases fishery products from fishery product wholesalers.

A **shipping agent in producing area** is a business operator that purchases fishery products from fishery product wholesalers and ships them to other wholesale markets.

If the same purchaser is registered to multiple wholesalers in the fish market, enter the net number of purchasers as the fish market and do not duplicate them.

3. For fishery products handled in the fish market during the past year (from 1 January to 31 December 2018), enter the volume of fishery products handled in the volume field, and the monetary value of fishery products handled (including consumption tax) in the monetary value field.

		Volume (Tons)				Monetary value (10,000 yen)			
Total of [1] + [2]	121
Live fish (included)	122
Landed volume [1]	123
Loaded volume [2]	124
Imported products (included)	125

The **volume** is the volume of fishery products (live fish, fresh fishery products, frozen products, and processed products) handled in the fish market during the past year.

In addition to the primary loaded volume (including products by inland water fisheries and aquaculture), the loaded volume carried in from other fishery districts and imported products are also included.

For the **monetary value**, enter the total monetary amount (including consumption tax) corresponding to the volume handled in the fish market entered in the volume field.

4. Regarding the equipment installed in the fish market as of January 1 for the purpose of quality/hygiene management of fishery products, mark all that apply.

	Seawater disinfection equipment	Ice crusher/maker	Deodorization equipment, exhaust gas treatment equipment	Fishery processing equipment	Other
131	0	0	0	0	0

Seawater disinfection equipment is the equipment to disinfect/sterilize seawater.

Ice crusher/maker is the equipment to make ice for covering fisheries products, etc. used at a fish market.

It does not include equipment that makes ice only for loading in refrigerator trucks and holds of fishery vessel.

Deodorization equipment, exhaust gas treatment equipment is equipment to purify air in a building.

Fishery processing equipment is the equipment to conduct initial processing of fishery products, packing work, etc. automatically such as a fillet machine or packing machine, etc.

End of survey. Thank you for your cooperation.
